Modern Aluminium

ICON LIFT & SLIDE PATIO DOORS / VISION RANGE / ENHANCED RANGE / AFFINITY RANGE

Icon Lift & Slide Patio Doors

ICON Lift & Slide Patio Doors are perfect for huge glazing spaces with each panel up to 3m wide. ICON Patio Doors are designed, tested and manufactured to the highest standards.

The inherent load bearing capacity of aluminium allows patio doors to be made with a higher percentage of glass area than other materials, allowing more natural light into your home.

The ICON Triple Rail Patio Door has all the features of a Dual Rail with the added benefit of a third track, allowing a 66% opening aperture, by comparison with 50% on the Dual Rail.

It's a brilliant alternative to a bifolding door for large openings in houses, luxury apartments and commercial buildings.

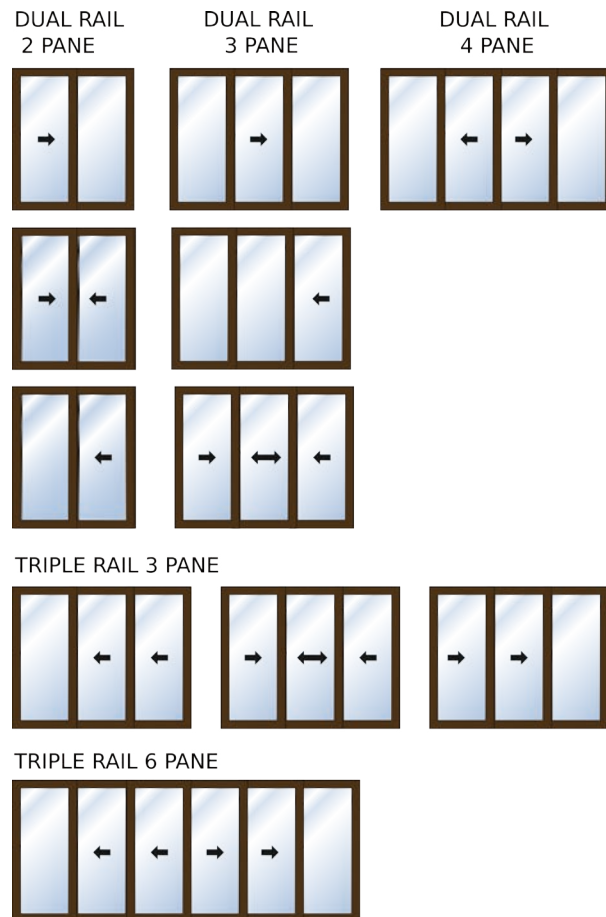

Opening Options

ICON Lift & Slide Patio Doors are available in a range of opening options to suit your space and requirements. With dual rail and triple rail solutions they can be configured to suit all architectural specifications.

Vision Range

Vision Aluminium Windows semi-flush construction elegantly compliments contemporary architectural design. The Vision Window is sustainable, energy efficient and comes fully certified to the BM Trada Q mark scheme.

Whilst aluminium weighs in at 67% less than steel, it also meets all building regulation standards including those for thermal efficiency.

A stunning, modernising design is achieved easily with slim aluminium being available in any colour. Aluminium, as a material is abundantly available and infinitely recyclable with no reduction in its quality. Aluminium does not deteriorate and makes minimal environmental impact.

The system is 66mm in depth and can be glazed both internally and externally with Double Glazed 28mm units through to 48mm Triple Glazed units.

The Vision Range comes fully certified to the CEN solution Gold quality standard.

Enhanced Range

Enhanced Aluminium Windows have been developed to satisfy the thermal requirements that the modern building industry demands, with a durability and design that will look good and last for years.

This window range combines all the latest technology in window design which combines polyurethane resin with a multi chamber isolator core to ensure all requirements of building regulations and project specifications are exceeded

The system is 66mm in depth and can be glazed both internally and externally with Double Glazed 28mm units through to 48mm Triple Glazed units.

Advantages

- Accepts double or triple glazed units.
- Flexible design and opening options.
- Patented thermal break technology
- Various sash options available
- Extensive range of extruded cill profiles
- Various mullion & coupler profiles to suit large span windows.
- Enhanced Security options
- Triple sealed to prevent water/air ingress
- Available in 200 RAL colours

Affinity Range

Introducing the Affinity Aluminium Flush Casement System. A modern design, engineered with contemporary sharp lines and exacting tolerances. Engineered and designed incorporating contemporary simplicity, ergonomic aesthetics, with excellent energy efficiency.

Our Affinity Windows offer unparalleled design with a sleek contemporary feel. Affinity Aluminium windows sit flush to the exterior frame creating a simple modern look, perfect for any home. Our Affinity windows are equipped with our high quality double glazed sealed units incorporating state of the art thermal break technology. All of which ensures your home is warm, comfortable and quiet, all year round.

Our designers set out to imagine a contemporary sleek window with sharp modern lines. Their dream became the Affinity Range of windows. By embedding locking hardware and hinges within a strong multi chambered aluminium frame and casement the Affinity Flush Sash marries security, thermal efficiency and modern elegance.

From the outside the opening sash sits flush with the outer frame in the closed position providing a design which is visually appealing and fits beautifully with modern constructions. Designed for top or side hung opening-out windows, this unique window is manufactured exclusively by Sean Doyles Windows Ltd. and is available in a huge range of colours.

FLUSH CASEMENT ALUMINIUM

Affinity Range

For that stylish, modern look with clean lines and a sleek profile our Affinity Flush Casement Aluminium Windows are the perfect choice.

Through innovative design and superior build quality, this window system offers high thermal and acoustic performance alongside the inherent strength and low maintenance benefits of aluminium to make your home safe and secure.

FEATURES

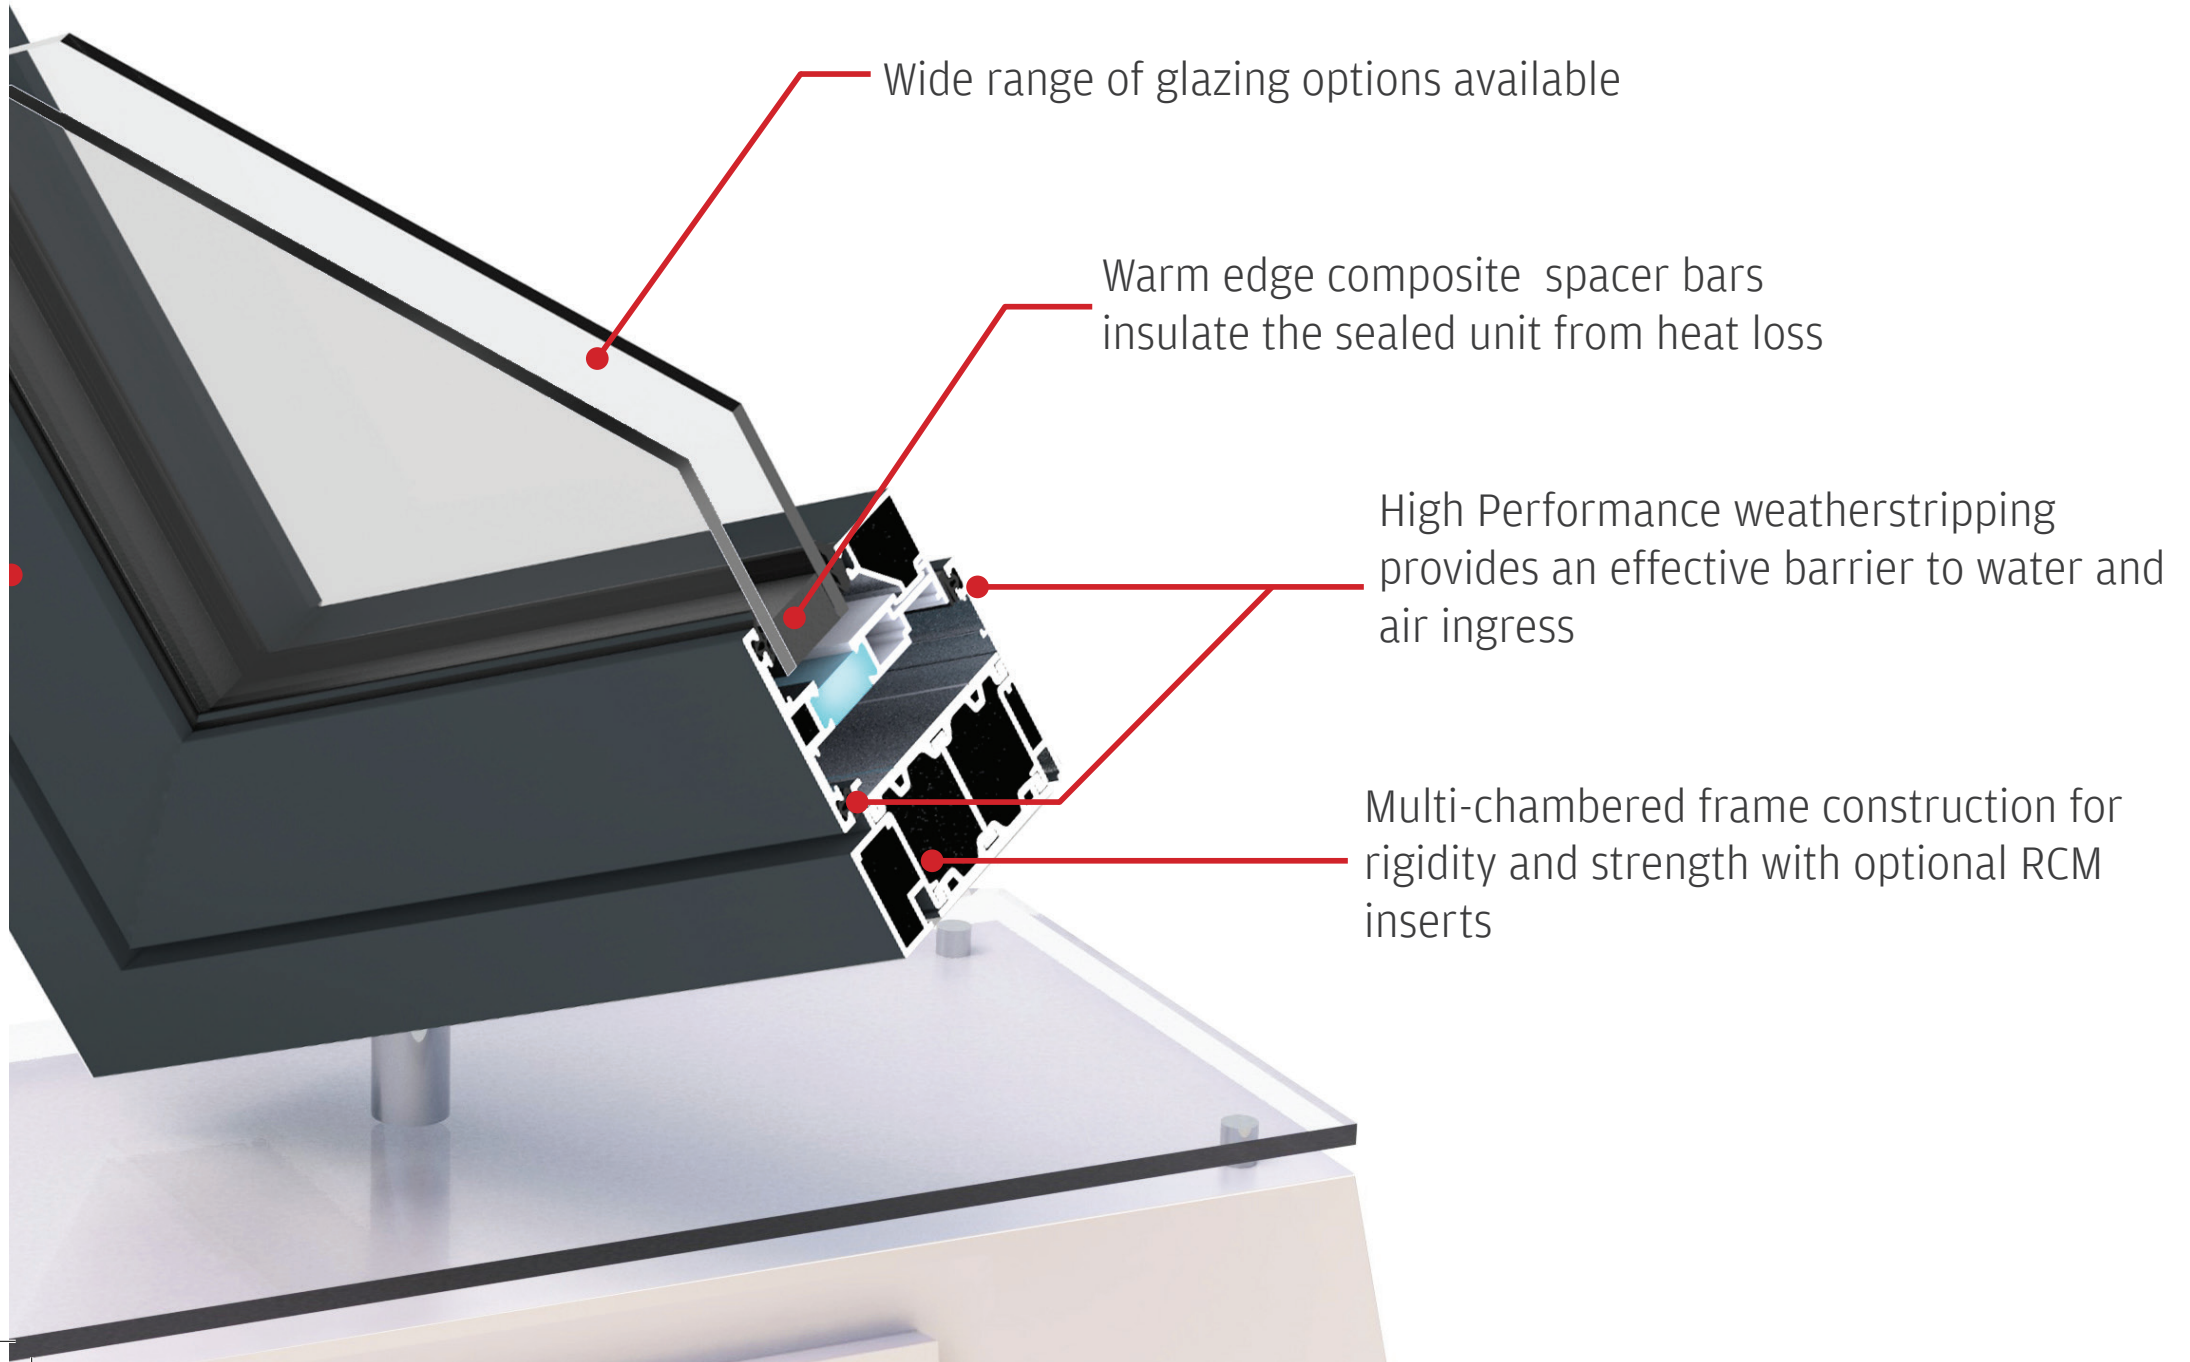

- Hidden espagnolette multi-point locking
- Child safety restrictions
- Enhanced weather performance
- Tested to hurricane force winds
- Enhanced security
- Surpasses the requirement of building regulations
- Standard hardware, including hidden hinges
- Thermally broken profiles as standard
- Independently tested
- Available in over 200 RAL colours
- Suitable for commercial and domestic applications

High security interlocking external bead

Modern square line edge detail

Manufactured using the latest in CAM Technology with almost seamless joins and exacting tolerances

Colour your home beautiful...

Your options on colour are almost unlimited. Choose from a vast palette of colour that frees you to choose your doors and windows, exactly as you imagine them.

Today, modern building trends are driven by architectural innovations and styling, leaning towards more contemporary design, with the muted and solid tones of greys and blacks featuring in the most inspirational design works of the day.

Anthracite Grey in a matt finish and Jet Black in a matt finish, along with Hippca Gloss White are currently the most in-demand colours from architects and building specifiers. As a result, profiles in these three individual colours are held in stock in large quantities. This permits customers to order from their actual site survey, for a fast delivery and not have order from drawings/plans, risking a correct fit at the first install, as builders work to tolerances, not exact sizes, in most instances.

All door and window profiles are available in any single colour taken from either the RAL or B.S. chart, offering a solution every time.

Your thermally broken aluminium profiles are powder coated. This is a process whereby the original, milled metal profile is prepped ready to take a coating of electrically charged powder. The profile is then heat treated at an extremely high temperature, bonding the powder to the metal. The finished surface is very durable and easy to maintain. The finish is also graded for its level of gloss with matt finished being the most popular on darker colours.

Powder coating is environmentally friendly as there is no excess of paint, as all residual powder is recycled within the process and has the ability to last decades without having to be painted. Your doors and windows will be coated using an Akzo Nobel powder product called Interpron. Akzo Nobel are a world leader in the coatings industry.

All door and window profiles are available in any single colour taken from either the RAL or B.S. chart, offering a solution every time.
